

# TDD4B2-U200 relay - 2 pole delay-on and 4 pole instantaneous Datasheet

## Description

Plug-in electronic railway timer relay with four instantaneous change-over contacts and two time delayed change over contacts. When the relay is activated there is a delay on pull-in for the time delayed contacts. The timer relay has a fixed customer specified delay time, but can also be supplied with an adjustable delay time (with lockable knob). The delayed contacts are weld no transfer contacts. The relay is equipped with two LEDs which indicate the presence of power supply and the energizing of the time delayed contacts.

The construction of the relay and choice of materials makes the TDD4B2-U200 relay suitable to withstand low and high temperatures, shock & vibrating and dry to humid environments.

No external retaining clip needed as integrated 'snap-lock' will hold relay into socket under all circumstances and mounting directions.

Compact design, choice of many options and a wide range of sockets makes the TDD4B2-U200 relay an easy and flexible solution to use.

## Application

These relay series are designed for demanding rolling stock applications. The TDD4B2-U200 is used in applications where both instantaneous contacts and time delayed contacts are necessary.

### Features

- Time delay and instantaneous relay
- 2 C/O contacts with delay on pull-in and 4 C/O instantaneous contacts
- Fixed time delay (no knob)
- Also available with adjustable time delay with lockable knob
- Total time delay range: 0.1 s...60 min
- Flat, square and silver plated relay pins for excellent socket connection
- Wide range sockets
- Integrated snap lock
- Transparent cover
- Optional positive mechanical keying relay to socket
- Flexibility by many options

### Benefits

- Proven reliable
- Long term availability
- Easy to maintain
- Low life cycle cost
- No maintenance

### Railway compliance

- EN 50155 Electronic equipment used on rolling stock for railway applications
- IEC 60571 Electronic equipment used on railway vehicles
- IEC 60077 Electrical equipment for rolling stock in railway applications
- IEC 60947 Low voltage switch gear and control gear
- IEC 61373 Rolling stock equipment - Shock and vibration test
- IEC 60947-5-4 Electromechanical components for control applications. This standard examines both coil and contact specifications in depth
- EN 50121 Electromagnetic compatibility for railway applications
- NF F 16-101/102, EN 45545-2 Fire behaviour - Railway rolling stock
- NF F 62-002 On-off contact relays and fixed connections

### Time delay specifications

|  |  |             |             |
|--|--|-------------|-------------|
| Time delay function  | Delay on pull-in and instantaneous   |             |             |
| Available time ranges, adjustable (xx)   | 0.1...1 s  | 0.3...3 s   | 0.6...6 s   |
|  | 1...10 s   | 3...30 s    | 6...60 s    |
|  | 0.3...3 min  | 0.6...6 min | 1 ...10 min |
|  | 3...30 min   | 6...60 min  |             |
| Accuracy - adjustment  | < 10 % of full scale value<br>After adjusting / fixed time setting: no variation in setpoint |             |             |
| Accuracy - repeatability   | ± 0.5 %  |             |             |
| Time variation - vs. voltage variation   | ± 0.05 % / % U <sub>nom</sub>  |             |             |
| Time variation - vs. temperature variation   | ± 0.2 % / K  |             |             |
| Recovery time  | < 0.2 s  |             |             |
| Pull-in time   | Instantaneous contacts : < 20 ms   |             |             |
|  | Delayed contacts depending on pull-in time setting (xx)                                      |             |             |
| Release time   | < 40 ms  |             |             |
| Maximum permissible ripple   | 50 %   |             |             |
| Example time delay: time delay set on 2 s : it will be between 1.7 s...2.3 s.<br>For example: 2.0 s. The ambient temperature is 40 degrees Celsius which is 20 degrees different compared to the standard 20 degrees Celsius. This results in 0.4 % extra time variation.<br>The applied voltage is 30 % lower than the nominal voltage. This results in 1.5 % extra time variation. The maximum total time variation is then 0.5 % (repeatability) + 0.4 % (temperature variation) + 1.5 % (voltage variation) = 2.4 %. In this case every new pulse will be between 1.95 s and 2.05 s. |  |             |             |

### Coil characteristics

| TDD4B2-U205-xx | 96                     | 67.2                   | 120                    |
| TDD4B2-U207-xx | 36                     | 25.2                   | 45                     |

Other types on request

Remarks:

- U<sub>min</sub> is the must-operate voltage at which the relay has picked up in all circumstances (worst-case situation), in practice the relay picks up at a lower voltage
- Always select the nominal voltage as close as possible to the actual voltage in the application

# TDD4B2-U200 relay

## Mounting possibilities/sockets

### Surface/wall mounting

|           |       |   |
|-----------|-------|---|
| 338002920 | V92BR | Screw socket, wall mount, front connection (9 mm terminals)                   |
| 338003900 | V93   | Screw socket, wall mount, front connection (7.5 mm terminals)                 |
| 338003950 | V99   | Spring clamp socket, wall mount, front dual connection (2.5 mm <sup>2</sup> ) |

### Rail mounting

|           |       |   |
|-----------|-------|---|
| 338003900 | V93   | Screw socket, rail mount, front connection (7.5 mm terminals)                 |
| 338003925 | V93BR | Screw socket, rail mount, front connection (9 mm terminals)                   |
| 338003950 | V99   | Spring clamp socket, rail mount, front dual connection (2.5 mm <sup>2</sup> ) |

### Panel/flush mounting

|           |     |   |
|-----------|-----|---|
| 338001700 | V88 | Cage clamp socket, flush mount, rear dual connection (2.5 mm <sup>2</sup> ) |
| 338001850 | V89 | Faston connection socket, rear dual connection (4.8 x 0.8 mm)               |
| 328100200 | V96 | Solder tag socket, panel mount, rear connection                             |
| 338400100 | V97 | Crimp contact socket, panel mount, rear connection, A260 crimp contact      |

For PCB mount: use 2x V32 according to pin layout

For more details see datasheets of the sockets

# TDD4B2-U200 relay

## Keying

### Mechanical keying relay and socket (optional)

#### Function:

- To prevent wrong installation
- To prevent damage to equipment
- To prevent unsafe situations

Using keyed relays and sockets prevents a relay is inserted in a wrong socket. For example it prevents that a 24 VDC relay is put in a 110 VDC circuit. Positive discrimination is possible per different function, coil voltage, timing, monitoring, safety and non-safety.

The D-relay socket keying option gives  $8 \times 8 = 64$  possibilities. Upon ordering the customer simply indicates the need for the optional keying. Mors Smitt will assign a code to the relay and fix the pins into the relay. The sockets are supplied with loose key receptacles. Inserting the keys into the socket is very simple and self explaining.

Remark: sockets and relay shown are only examples.

#### Top view socket

#### Bottom view relay

Remark: for 8 pole relays keying will be in 2 outer keying holes only.

# TDD4B2-U200 relay

## Instructions

### Installation, operation & inspection

#### Installation

Before installation or working on the relay: disconnect the power supply first! Install socket and connect wiring according to the terminal identification. Plug relay into the socket ensuring there is no gap between the bottom of relay and the socket. Reverse installation into the socket is not possible due to the mechanical blocking snap-lock feature. Check to ensure that the coil connection polarity is not reversed. Relays can be mounted tightly together to save space.

When rail mounting is used, always mount the socket in the direction of the UP arrow, to have proper fixation of the socket on the rail.

#### Warning!

- Never use silicon in the proximity of the relays.
- Do not use the relay in the presence of flammable gas as the arc generated from switching could cause ignition.
- To remove relays from the socket, employ up and down lever movements. Sideway movement may cause damage to the coil wires.

#### Operation

After installation always apply the rated voltage to the coil to check correct operation.

Long term storage may corrode the silver on the relay pins. When plugging the relay into the socket, the female bifurcated or trifurcated receivers will automatically cut through the corrosion on the pins and guarantee a reliable connection.

Before actual use of relays, switch the relay 10 times. The contacts will both be electrically and mechanically cleaned due to the positive wiping action. Sometimes a contact can build up increased contact resistance ( $\leq 15 \text{ m}\Omega$  when new). When using silver contacts one can clean the contact by switching a contact load a few times using  $>24 \text{ VDC}$  &  $\sim 2 \text{ A}$ . Increased contact resistance is not always problematic, as it depends on circuit conditions. In general a contact resistance of  $1 \Omega$  is no problem, consult Mors Smitt for more information.

Condensation in the relay is possible when the coil is energised (warm) and the outside, environmental temperature is cold. This is a normal phenomenon and will not affect the function of the relay. Materials in the relay have no hygroscopic properties.

#### Inspection

Correct operation of the relay can easily be checked as the transparent cover provides good visibility of the moving contacts. If the relay does not seem to operate correctly, check for presence of the appropriate coil voltage and polarity using a suitable multimeter. If a LED is fitted, it indicates voltage presence to the coil. If coil voltage is present, but the relay does not operate, a short circuit of the suppression diode is possible (This may be due to the coil connection having been reversed).

If the relay doesn't work after inspection, replace the relay unit with a similar model. Do not attempt to open the relay cover or try to repair. Contacts are calibrated and in balance, touching can affect proper operation. Also re soldering may affect correct operation. Since 2009 relays have tamper proof seals fitted and once broken, warranty is void.

Most relay defects are caused by installation faults such as over voltage, spikes/transients, high/short current far exceeding the relay specifications. When returning the relays for investigation, please provide all information on the RMA form. Send defective relays back to the manufacturer for repair or replacement. Normal wear and tear or external causes are excluded from warranty.
